

—PREFACE—

“The function of education is to teach one to think intensively and critically.”

Education is a tool that strengthens the foundational skills acquired early in childhood and make possible a lifetime of learning. There is a focus on an integrated curriculum. An integrated curriculum is described as one that connects different areas of study by cutting across subject-matter lines and emphasizing unifying concepts. Integration focuses on making connections for students, allowing them to engage in relevant, meaningful activities that can be connected to real life. Achieving, learning for all, is challenging, but it is the right agenda for the real gist of education. This document is the overview of the syllabus prescribed for the standard it is meant for, so that the children, teachers and the parents have a concrete idea as to how much is to be learnt by the child for the scheduled examination. It comprises of the pattern of examination and detailed date sheet for the whole session. In short it is the index, a glance of which, will help a child to get prepared for assessment and evaluations with ease.

“Learning is not attained by chance, it must be sought for, with passion and intelligence.”

Objectives of the Curriculum

- To identify and articulate the curriculum challenges for educating young people for the twenty first century.
- Taking care of different styles of learning i.e. audio, visual and experimental.
- The theoretical knowledge to be pursued ensuring maximum application of it.
- Correlating academics to real life situations balancing social and emotional stimulation among children and imbibe human values.
- To shape and influence the development of a national collaborative approach to curriculum.
